

Cellular & Backup Battery Kit

Works with VeraPlus

Congratulations!

The Vera Cellular & Backup Battery Kit provides added reliability to your Vera system in case of power and/or Internet service interruption. Use with VeraPlus Controllers.

In this package you'll find:

Cellular Dongle

Rechargeable Backup Battery

Cellular Dongle

The Cellular Dongle provides automatic emergency backup communications if your internet service stops working. The Cellular Dongle requires an active monitoring service account and will provide your home with cellular backup mode. With this Cellular Dongle and the Vera Central Alarm Monitoring Service, when triggered, your police, fire or EMS dispatch will occur even if internet service stops.

Note: Your home must be within the cellular wireless network coverage area, which includes most of the US.

Installation

- 1 Plug the 3G Cellular Dongle into the USB port on the rear of your Vera Controller.

- 2 Message will appear confirming your dongle is ready to connect to the internet should you lose your connection.

Operation

Cellular Backup Mode

In order to continue your home's connectivity during this broadband interruption, your home is being monitored through the Vera dongle over the backup wireless cellular network.

During the time your utilizing your Cellular Backup Connection, you will have limited access to your user interface. This simple user interface as shown below, allows you to change only your house modes until the broadband Internet connection is restored.

Battery Backup

The rechargeable Backup Battery will activate automatically to keep your Vera controller running for approximately 6 to 8 hours if AC power goes out.

Installation

- 1 Unplug the AC adapter cord from the rear of your Vera Controller.

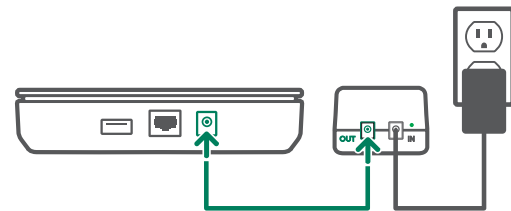

- 2 Plug the AC adapter cord into the connector marked IN on the Backup Battery.

- 3 Plug the cord from the connector marked OUT on the Backup Battery into your Vera Controller.

Note: Be sure that your Backup Battery is in the ON position. The LED will show RED until fully charged and turns GREEN.

Operation

Backup Battery activates automatically to power your Vera Controller if AC goes out.

Most security sensors, such as Door/Window Sensors, use battery power and will continue working during a power outage.

With Backup Battery & Cellular Dongle your Vera system can continue providing Central Alarm Monitoring service for police, fire, or EMS dispatch even when power goes out.

*Note: Other devices requiring AC power, such as **cameras** and **modems** and **routers**, will not work when power goes out (unless they have their own battery backups.)*
